

EASY SCHEME

With the 1.5.5 version of Easy Scheme there will be important news in the software installation procedure.

Up to now you have started from the installation of the 1.0 version beginning from the CD; the subsequent updates were published on Metal Work website in the form of patches, which effectively overwrote the previous versions in order to implement the new symbols and new features.

With the 1.5.5 version we will publish directly on our website the complete software (not a patch for the upgrading of a previous version): in this way it will be no longer necessary to start from the installation of the 1.0 version and then update it through a patch, but you will download directly the setup of the last updated version, without needing to go through the 1.0 version anymore.

For the users who already use Easy Scheme, the steps for installing the 1.5.5 version are:

1st - Make a copy of the following folders:

- CustomDatabase
- Projects
- Custom Symbols

making sure that these folders contain the data to be saved.

These folders are in the programme installation folder.

2nd - uninstall the EASY SCHEME programme previously installed.

3rd - install the new version EASY SCHEME 1.5.5 (or later ones).

4th - replace the three above mentioned folders in the new programme installation folder.

EASY SCHEME 1.5.5 version - compared to the previous one - contains the symbols of the new EB80 valve island.
